SURYA PRAKASH K.S.

ENTRY-LEVEL SOFTWARE ENGINEER | JAVA BACKEND & FULL-STACK

Chennai, Tamil Nadu, India

Email | +91 91503 57320 | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Entry-level software engineer focused on Java backend and full-stack development, with independent projects using Spring Boot REST APIs and React interfaces. Built authentication, transactional data workflows, and real-time collaboration; added automated tests and CI, packaged services with Docker, and published frontend demos. Seeking Java/Spring Boot and junior full-stack roles.

TECHNICAL SKILLS

Languages Java 17, object-oriented programming, JavaScript, TypeScript, SQL
Backend Spring Boot 3 / 4, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Jakarta Validation, STOMP / SockJS
Frontend React, React Router, Vite, responsive interfaces
Databases MySQL, H2, relational modeling, transactions, Flyway
Security JWT authentication, BCrypt, role and membership-based authorization
Testing & delivery JUnit 5, Spring Boot Test, MockMvc, Docker, Docker Compose, Maven, Git, GitHub Actions, Vercel frontend demos

PROJECTS

CollabBoard | Real-Time Collaboration Platform

Java 17, Spring Boot 3.3.2, React 18, MySQL, JWT, STOMP / SockJS, Docker

Source code | Live demo*

- Built a multi-user Kanban workspace for boards, lists, cards, comments, activity history, and viewer presence, combining REST APIs with STOMP events for live updates.
- Secured WebSocket commands by deriving actor identity from the authenticated principal and checking board membership before reads or mutations.
- Modelled collaboration data across seven JPA entities and added eight JUnit 5 tests; GitHub Actions runs backend tests, the React production build, and Docker Compose configuration validation.

Nexora | Full-Stack E-Commerce Platform

Java 17, Spring Boot 4.0.6, React 19, MySQL, Spring Security, JWT, Docker

Source code | Live preview

- Implemented Spring Boot REST workflows for identity, catalog, profiles, checkout, orders, invoices, and administration with validated request models and transactional services.
- Enforced server-derived totals and stock reservation inside a transaction using product-row locks; checkout tests cover tampered client prices and insufficient stock.
- Added JWT authorization, manual UPI proof review and Razorpay code paths, PDF invoices, and email workflows; provider and SMTP credentials are deployment-configured.
- Current source contains nine JPA entities and 33 JUnit test methods; Docker packaging and GitHub Actions cover backend tests, both storefront builds, and Compose configuration validation.

Cars15 | Car Inventory and Finance Demo

Next.js 14, React 18, TypeScript, Spring Boot 3, Java 17, MySQL / H2, JWT

Source code | Live demo

- Built a seeded inventory demo with vehicle browsing and comparison, saved listings, test-drive and price-alert flows, and finance calculations; the frontend can use local demo state when the API is unavailable.

* CollabBoard is a frontend demo; its Spring Boot backend is not publicly hosted. Nexora is a storefront preview; live backend and payment behavior are not confirmed.

EDUCATION

B.Tech in Information Technology 2019 - 2023
Panimalar Institute of Technology, Anna University, Chennai CGPA: 7.6 / 10

INDEPENDENT DEVELOPMENT

Independent software engineering development 2023 - 2026
Prepared for the UPSC Civil Services Examination after graduation, then focused on independently building, testing, and deploying software projects.
