

SURYA PRAKASH K.S

Full-Stack Java Developer | Java | Spring Boot | React | MySQL | JWT | Microservices
Chennai, India | [+91 91503 57320](tel:+919150357320) | suryakannan32123@gmail.com | [GitHub](#) | [LinkedIn](#) | Available Immediately

Professional Summary

Full-Stack Java Developer building secure Spring Boot applications with React and Next.js frontends. Delivered 4 full-stack products spanning real-time collaboration, e-commerce, microservices, and an Indian used-car marketplace, supported by JWT/RBAC, Docker, automated tests, and live deployments. Seeking a full-time role developing reliable, user-focused web solutions.

Selected Highlights: 4 recruiter-ready applications, 55+ backend routes, 22 JPA entities, 22 backend tests, WebSocket and STOMP, Spring Cloud, invoice PDFs, Docker Compose, GitHub Actions, and Vercel.

Core Skills

Backend	Java, Spring Boot, Spring Security, JWT, RBAC, REST APIs, Spring Data JPA, Hibernate
Frontend	React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
Database	MySQL, schema design, relational modeling, JPA mapping, H2 test database
Architecture	Microservices basics, Spring Cloud Gateway, Eureka, WebSocket/STOMP, API design, OOP, SOLID

Professional Experience

Full-Stack Java Developer | Personal Projects & Self-Directed Development Jul 2023 – Present
Java full-stack development, deployment, testing, and role preparation Chennai, India

- Delivered 4 end-to-end applications across collaboration, e-commerce, order processing, inventory, finance, and customer booking workflows, each with source code and a recruiter-accessible interface.
- Engineered 55+ backend routes and 22 JPA entities with layered Spring Boot services, DTO boundaries, validation, and role-based access rules.
- Created production-style flows including JWT login, admin/customer permissions, authenticated WebSockets, booking management, order emails, and invoice PDFs.
- Automated build and validation with Docker Compose, GitHub Actions, Vercel deployments, and 22 backend tests spanning authentication, inventory, booking, ordering, email, and PDF workflows.

Engineering Projects

CollabBoard - Real-Time Collaboration Platform *React, Spring Boot, MySQL, JWT, STOMP, Docker*
[GitHub](#) | [Live Demo](#)

- Developed a JWT-secured real-time collaboration platform with authenticated STOMP updates, board-level authorization, and a 7-entity MySQL model.
- Designed 8 REST routes for workspaces, members, lists, cards, comments, and activity logs using Spring Boot, JPA, and transactional services.
- Implemented drag-and-drop functionality with real-time STOMP synchronization, allowing multiple users to see changes instantly without page refresh.
- Validated delivery with Docker Compose and GitHub Actions checks covering 8 backend tests, frontend build, and container startup.

Nexora - Full-Stack E-Commerce Platform *React.js, Spring Boot, MySQL, Spring Security, JWT*
[GitHub](#) | [Web Demo](#) | [Mobile Demo](#)

- Developed an end-to-end e-commerce platform with catalog, cart, wishlist, checkout, order management, admin workflows, emails, and invoice PDFs.
- Structured 27+ REST mappings across 6 JPA entities, separating customer, admin, profile, product, category, and order responsibilities.
- Secured account and operations workflows with JWT/RBAC, email verification, password reset, and protected admin access.
- Verified high-risk flows with 8 backend tests for JWT, profile responses, email builders, and invoice PDF generation.

Engineering Projects Continued

OrderFlow - Microservices Order Processing System *Spring Boot, Spring Cloud Gateway, Eureka, MySQL, Docker, Prometheus*

[GitHub](#) | [Live Demo](#)

- Architected a Spring Cloud microservices system with API Gateway, Eureka discovery, order, inventory, notification, and shared event modules.
- Coordinated order creation and inventory decrement across services through gateway routing, service discovery, fallback endpoints, and Dockerized startup.
- Modeled 4 JPA entities and 7 REST routes across order/inventory services, keeping stock changes and order state behind clear service boundaries.
- Instrumented validation and visibility with 4 backend tests and Prometheus configuration for basic service-health monitoring.

Cars 15 - Indian Used-Car Marketplace

Next.js, Spring Boot, Spring Security, JWT, MySQL/H2, Docker

[GitHub](#) | [Live Demo](#)

- Launched a Vercel-hosted marketplace presenting 21 India-market vehicles across hatchback, sedan, SUV, and MPV body styles with model-matched imagery and responsive browsing.
- Delivered comparison, wishlist, recently viewed cars, advanced filters, EMI and ownership-cost tools, printable specifications, test-drive booking, and price alerts.
- Engineered JWT login/registration, role-based admin access, and Spring Data JPA models for users, vehicles, wishlists, bookings, and alerts behind a layered REST API.
- Enabled inventory CRUD, booking status updates, analytics, seeded demo accounts, and connected Next.js dashboards for complete recruiter testing.
- Standardized local and CI delivery through H2 development, MySQL-ready configuration, Docker Compose, GitHub Actions, production Next.js builds, and MockMvc integration tests.

Tools & Technologies

Delivery Docker, Docker Compose, GitHub Actions, CI/CD workflows, Vercel

Engineering Maven, Git, Postman, Prometheus, Swagger/OpenAPI, JUnit, MockMvc

Education

Panimalar Institute of Technology, Anna University

2019 – 2023

Bachelor of Technology in Information Technology

CGPA: 7.6/10

Delivery & Engineering Practices

- Applied JWT/RBAC, protected admin and customer routes, board-level authorization, input validation, global exception handling, and authenticated WebSocket handshakes.
- Maintained environment-based configuration, seeded local data, Dockerized startup, CI build checks, technical READMEs, and working live-demo links for repeatable review.
- Backed high-risk paths with 22 tests across authentication, profiles, boards, orders, inventory, bookings, email generation, and invoice PDF output.
- Used layered architecture, DTO boundaries, transactional services, relational modeling, and clear module ownership to keep feature additions testable and maintainable.

Certification & Ongoing Learning

Complete Java Programming | Udemy

Java, OOP, collections, exception handling

Regular DSA practice focused on arrays, strings, collections, recursion, searching, sorting, and problem decomposition.

Selected Engineering Outcomes

- Reduced reviewer setup friction by packaging multi-service environments with Docker Compose, environment templates, seeded demo accounts, and documented startup commands.
- Improved workflow reliability by validating authentication, inventory, booking, order, email, and PDF paths with focused JUnit and MockMvc coverage.
